# Public health, animal health and laboratory bioassay services

SynTech Research provides comprehensive laboratory, semi-field and field studies on pests of urban, agricultural, medical and veterinary importance.

Its services include:

- Program design and management
- Delivery of results and recommendations

Studies are conducted to GEP/GLP and WHOPES, OECD, EPA, ISO, BS, IRAC, AFNOR or CEB guidelines, as required.

## Public health

Insecticide testing is conducted on flies, mosquitoes, cockroaches, ants, termites, moths, fleas, beetles, bedbugs, ticks, lice, mites, chiggers and wasps.

Contact, feeding and residual assays are undertaken in environment-controlled laboratories.

Semi-field or field testing takes place on ants, flies, mosquitoes and cockroaches.

Small mammal laboratory and field trials on rats, mice, voles and moles.

Services are available in Europe, the Americas and Asia, including bioassays conducted at SynTech Research Public Health laboratories in USA, France and the Philippines.

## Animal health

SynTech Research carries out insecticide testing on ticks, fleas, stable flies, litter beetles, poultry mites.

## Screening and resistance monitoring

Laboratory, semi-field and field studies are undertaken on agricultural and stored product pests.
