# Public health, animal health and laboratory bioassay services

SynTech Research provides comprehensive laboratory, semi-field and field studies on pests of urban, agricultural, medical and veterinary importance. Services are available in Europe, the Americas and Asia.

Our services include:

- Program design and management
- Delivery of results and recommendations

Studies are conducted to GEP/GLP and WHOPES, OECD, EPA, ISO, BS, IRAC, AFNOR or CEB guidelines, as required.

## Public health

Studies are conducted at SynTech Research Public Health laboratories in USA, France and the Philippines.

Insecticide testing is conducted on flies, mosquitoes, cockroaches, ants, termites, moths, fleas, beetles, bedbugs, ticks, lice, mites, chiggers and wasps.

Contact, feeding and residual assays are undertaken in environment-controlled laboratories.

Semi-field or field testing takes place on ants, flies, mosquitoes and cockroaches.

Laboratory and field trials are conducted on rats, mice, voles and moles.

## Animal health

SynTech Research carries out insecticide testing on ticks, fleas, stable flies, litter beetles, poultry mites.

## Laboratory bioassay services

Laboratory, semi-field and field studies are undertaken on agricultural and stored product pests.

Studies include laboratory and greenhouse screening, resistance monitoring and mode of action testing, conducted in SynTech Research laboratories in the US, EU and Asia Pacific
