

## News Release

10 November 2020

### **SynTech Brazil's Field Services expansion strategy – the next step**

SynTech Research is one of the world's foremost providers of contract Research and Development services for crop protection and production. Following the recent announcement of SynTech Brazil's new field experimental station in Bandeirantes, Paraná, we are very pleased to announce a second new field station, the Palmeiras de Goiás Experimental Station, Goiás State, located in the Cerrado region of Central Brazil. It is one of most important agricultural areas in the country, growing a variety of economically important and representative crops.

This new Station will offer a wide range of services including: GEP – Bio-Efficacy; GLP – Field Trials and Residue Analysis in Plants, Soil and Pollen & Nectar, Ecotoxicology and Seeds & Traits Studies. With a team of well-trained researchers and supporting staff, the site comprises 15 hectares and all the other facilities that are needed for conducting a comprehensive SynTech field studies program, to meet customers' requirements and Regulatory Authority standards.

Fernando Gallina, SynTech Regional Director Latin America comments, "The establishment of this new field station is the latest step in the program of expansion of SynTech's Brazil operation – and the Company's commitment to our clients in delivering their products for agriculture."

Edilaine Cova Gaitarossa, Field Testing Manager adds, "The Palmeiras de Goiás Station will allow us to serve our clients in this dynamic, important and representative area

for agriculture development – and improve our geographical coverage of the Bahia (west), Tocantins and part of Minas Gerais States.”
